

Suggested solution:

Integration of Storytelling with Information Technology in the Learning environment

What is being taught?

A new set of laws of thought, based on five relationships, which explain:

- * the types of interconnections between all that is,
- * how each expresses unbalance and
- * how they attain equilibrium.

This knowledge is conveyed through a sacred bundle. The bundle wraps a set of 17 power stones called *Khuyas of the Mastay*.

Who are the characters of the story?

The characters are a teof the story Mountains. However, the student is also the audience.

How the transmedia story unfolds?

At first, we learn as we identify ourselves with the girl and her role. At this stage, the story is just an on-line e-book (2016). Then multimedia is added to increase realism and interaction (2018).

Later on, the story will be turned into an e-comic with ambience sound (2019). At that point, the roadmap splits in two paths aimed at increasing *realism* and *interaction* respectively.

Thirty-two years later, both paths converge into a VR projection of the old lady, with us as her students (2047). Sixteen years after, teacher and surroundings become holographic projections with improved interaction (2055).

Finally, the emphasis returns to the starting point, with a human to human interaction and reality as the background, with face-to-face workshops now enriched by holographic projections (2071).
